

Truly Wisconsin Surnames

Lee Hartman (lhartman [at] siu [dot] edu)

Here's a list of over 200 surnames whose owners—according to WhitePages.com in 2010 (but unfortunately the data are no longer available online)—are more numerous in Wisconsin than in any other state of the U.S. WhitePages.com evidently based its figures on telephone listings. This refers to raw numbers, not percentages of the Wisconsin population. As you see in the table below, in the blue-tinted row, the whole population of Wisconsin, some 5.6 million, is only 1.81% of the whole U.S. population (with 50 states, an "average" state would have 2%). The remainder of the list tells you, for example, that the name **Dantoin** belongs to 58 people in Wisconsin and that the name occurs nowhere else in the country, so they are 100% of the **Dantoin**s in the U.S. As you move down the list from 100% down toward 10%, remember that even 10% is five times what you might expect of an evenly distributed name in an average-sized state. These names are truly "Wisconsinite" in some sense.

For more on the ethnic background of these names, [click here](#).

| Name | # in WI | % of U.S. in WI |
|------------------|-----------|-----------------|
| Whole population | 5,636,803 | 1.81% |
